

PARESH MAHESHWARI

SENIOR DATA ANALYST | BUSINESS INTELLIGENCE | SQL | POWER BI | TABLEAU

Kirkland, WA | 201-936-8255 | paresh.15392@gmail.com

PROFESSIONAL SUMMARY

Senior data and business intelligence professional with 6+ years of experience turning complex marketplace, operational, commercial, and healthcare data into executive-ready insights. Builds SQL/Python analytical datasets, Power BI/Tableau dashboards, KPI frameworks, and recurring business reviews that improve decisions across Product, Finance, Sales, Marketing, and Operations. Delivered measurable outcomes including 25% less manual reporting, 20% fewer processing delays, 15% higher seller adoption, 40% faster analytics batches, and \$4M in campaign impact.

CORE SKILLS

Business Intelligence & Reporting: Power BI, Tableau, Qlik Sense, executive dashboards, KPI scorecards, WBR/MBR reporting, variance and trend analysis

Analytics & Decision Support: Marketplace, product, pricing, customer experience, operations, commercial, campaign, cohort, segmentation, forecasting

SQL, Programming & Modeling: Advanced SQL, CTEs, window functions, query optimization, Python, Pandas, NumPy, PySpark, ETL, star schemas, semantic models

Data Platforms & Governance: Redshift, Snowflake, SQL Server, AWS S3, Azure, Informatica MDM, Veeva CRM, Salesforce, SSIS, data quality

Business Partnership: Requirements gathering, stakeholder management, root-cause analysis, metric governance, QA/UAT, Jira, documentation, executive storytelling

INDEPENDENT ANALYTICS & AI PROJECTS

BI, Analytics & Generative AI Development | Independent

05/2025 - Present

Projects - Kirkland, WA

- Built an AI-powered job application agent using Python, LLM workflows, Streamlit, and SQLite to collect and score job postings, generate tailored application materials, verify claims, and assemble reviewable application packets.
- Developed Power BI and SQL analytics prototypes for sales, customer, product, and market KPIs while strengthening Snowflake validation, semantic modeling, data-quality reconciliation, and GenAI-assisted KPI documentation skills.

PROFESSIONAL EXPERIENCE

Senior Business Analyst - Marketplace & Business Intelligence

10/2023 - 05/2025

| Amazon - Seattle, WA

- Reduced manual reporting effort by 25% by building SQL-backed Power BI/Tableau dashboards and reusable datasets for seller performance, shipment volume, Buy Shipping adoption, handling time, transit time, and operational KPIs.
- Restored pricing transparency after third-party carriers introduced dynamic pricing by developing a rate-versus-mix decomposition framework that separated negotiated rate effects from changes in weight, zone, dimensions, and shipment mix.
- Reduced processing delays by 20% and improved delivery-promise accuracy by analyzing seller cohorts, carrier patterns, handling-time drivers, transit-time distributions, and operational bottlenecks.
- Identified seller adoption and migration opportunities through cohort, lifecycle, and behavioral segmentation analyses, contributing to a 15% increase in Buy Shipping adoption.
- Prepared and presented weekly business reviews featuring standardized KPIs, historical trends, forecast and variance drivers, and recommended actions, improving cross-functional alignment by 20%.
- Built automated, trigger-based campaign analytics for new sellers, out-of-stock revenue recovery, and cost-savings outreach using dynamic eligibility rules, monthly refreshes, behavioral segmentation, and deduplication controls.
- Quantified the business value of valid tracking by linking Buy Shipping and non-Buy Shipping tracking rates with customer-contact frequency, cost per contact, and shipment volume to support product and policy decisions.
- Reduced nightly analytics batch time by 40% by optimizing complex SQL/PySpark transformations, refresh dependencies, workload scheduling, and multi-source data-validation workflows in Redshift.

Senior Technical Consultant - BI Governance & Data Quality |

03/2023 - 09/2023

Qvest - Seattle, WA

- Led data governance and data-quality initiatives across enterprise BI systems, improving trust in financial analytics, forecasting, and operational reporting through standardized definitions, validation controls, and source-to-target rules.
- Conducted UAT and QA for new data pipelines and BI sources, validating schema design, ETL transformations, metric accuracy, exception handling, and stakeholder sign-off before production release.
- Built and tested BI data models and ETL logic for forecasting and planning use cases, ensuring consistent outputs and stable pipeline performance across development, test, and production environments.

Senior Solution Consultant - Life Sciences Analytics | Deloitte -**04/2019 - 03/2023**

Seattle, WA

- Delivered custom dashboards and analytical models to healthcare and life-sciences clients across clinical operations, commercial reporting, and payer-provider analytics.
- Built campaign reporting and segmentation frameworks using SQL, Python, and Excel automation, enabling optimization initiatives that generated \$4M in incremental business impact.
- Enabled MDM and CRM analytics across 40+ countries by standardizing HCP/HCO data, customer hierarchies, privacy rules, and Veeva CRM integrations, increasing market reach by 20% and segmentation accuracy by 15%.
- Designed ETL processes to ingest, validate, and standardize multi-source healthcare feeds into AWS S3, Redshift, Informatica MDM, Veeva CRM, and downstream reporting environments.
- Reduced manual investigation effort by 30% by implementing Python/SQL data-quality monitoring for failed loads, missing attributes, duplicates, discrepancies, and downstream reporting impacts.
- Automated match-merge and survivorship rules within MDM workflows, reducing manual data-stewardship effort by 30%, and built Tableau dashboards to monitor completeness, accuracy, duplicate rates, and recurring data-quality issues.
- Partnered with business teams and third-party vendors to prioritize user stories and feature requests in Jira, coordinate UAT, resolve defects, and support releases through production.

Data Analytics & Integration Intern | John Wiley & Sons -**06/2018 - 08/2018**

Hoboken, NJ

- Improved order-reconciliation efficiency by developing SSIS packages and SQL Server stored procedures to automate transaction matching, exception identification, and reporting.
- Developed Qlik Sense dashboards for premium SaaS subscription and application-performance trends, contributing to a 20% revenue increase through improved commercial visibility.

EDUCATION

Master of Science, Management Information Systems | Stevens**12/2018**

Institute of Technology - Hoboken, NJ

Bachelor of Engineering, Electronics & Telecommunication |**06/2014**

University of Pune - India
